CELEBRATING OVER 50 YEARS OF

**FAMILY.
QUALITY.
PASSION.**

**WE
WESTERN WOODS**

MEET THE RICHTERS

Since 1971 - for over 50 years - the Richter family has lead Western Woods, and, the industry forward. It all started with Rick Richter, followed up by son Chris Richter, brother-in-law Tom Von Moos, and grandson Kevin Richter.

[PHOTO] MEET OUR LEADERSHIP THROUGH THE GENERATIONS: (Right to left): Tom Von Moos, Rick Richter, Chris Richter, and Kevin Richter.

**ARE
WOODS.**

evin Richter. Photo by DM Anderson.

↘ **THIS IS OUR STORY**

Established in 1971 by Rick Richter, Western Woods has been built from the ground up to be a force in the lumber production and distribution industry. And he built this company on a promise: to strive each day not to be the biggest in the industry but to be the best. For 50 years, we have delivered on that promise. We pride ourselves in successfully providing in-demand, top-quality services, lumber products, and composite building materials to clients throughout the West Coast.

"Do what you say you're going to do, treat your suppliers like customers, and the customer always comes first." -Rick Richter

At Western Woods, we strive to innovate. The needs and expectations of the market are changing, and we stand ready to meet them. Every day, our team is driven to stay ahead of current trends and is always looking for new

ways to deliver better value to our customers. We listen to the needs of our customers - your needs - and respond to them quickly. As a family-owned and operated business, we understand the importance of maintaining strong relationships. Whether you're a new customer or a long-term supplier, we are here for you. As Rick often says, "Do what you say you're going to do, treat your suppliers like customers, and the customer always comes first."

Through our experience, our knowledge, and our ambition, we deliver the results you need for success. We've been delivering success for 50 years.

Join us for the next 50,

Chris Richter

PREMIUM PRODUCTS**

WHAT WE DO

Western Woods Premium Designs Patterns and Trim offers leading performance, versatility, and excellent appearance for any build.

At Western Woods, we pride ourselves in successfully delivering to our customers a line of products that offer exceptional value for money, providing industry-leading performance and durability. More importantly, these products must be able to do all of that while also being friendly to the environment. Our **Western Woods Premium Designs™ Patterns & Trim** product line embodies these core values.

With our Premium Designs lumber, every customer receives a product that has been sustainably sourced and expertly crafted. This combination of excellent source material and craftsmanship delivers professional-grade performance and versatility across a wide array of interior and exterior applications. Within the Premium Designs product range, you'll find woods such as the reliable Radiata Pine, the versatile White Fir, and the gorgeous Western Red Cedar.

→ **FOUR PRODUCTS. SO MANY OPTIONS.** With Premium Designs products, the possibilities are nearly endless. Learn more about our available finishes, patterns, and sizing options on **PAGE 16** or call a member of our sales team at **(800) 824-4100** for additional information.

ENDURAWOOD™

WESTERN WOODS PREMIUM FIR AND PINE PATTERNS + TRIM

DURABLE AND VERSATILE.

At Western Woods, we believe that affordable building material should not equal sub-standard quality or performance. With **Western Woods ENDURAWOOD™ Premium Patterns + Trim**, you will find an excellent wood product that strikes the right balance of strength, value, and quality appearance without breaking your budget.

Available in White Fir and Pine, Western Woods **ENDURAWOOD™** is easy to work with whether you are working with the material by hand or with power tools. Thanks in part to their fine, smooth grain, both species are known for their ability to take stain and paint with ease, allowing **ENDURAWOOD™** to achieve a clean look without any grain raising or deformation. Better still, thanks to the smooth texture of both species, **ENDURAWOOD™** firmly grips onto most paints, stains, and other surface applications, providing your project the ability to maintain an exceptional appearance over time.

ENDURAWOOD™ offers the versatility you need to take on a wide variety of applications. From window and door trim to siding, fascia to ceilings, and more. In addition to its endurance and versatility, we offer **ENDURAWOOD™** in a wide range of patterns and textures. And for those challenging projects, we offer a custom pattern service as well.

AVAILABLE OPTIONS

INTEGRAWOOD™

WESTERN WOODS PREMIUM FINGER-JOINTED LUMBER

BEAUTIFUL AND VERSATILE

At Western Woods, we take performance, value, and sustainability seriously. With our **INTEGRAWOOD™ Premium Finger-Jointed Lumber**, we offer a product that delivers just that.

INTEGRAWOOD™ offers superior strength and performance over other non-engineered wood products thanks in part to our sustainably sourced, defect-free raw material. As part of our thorough production process, each piece of **INTEGRAWOOD™** is finger-jointed and edge-glued by our expert team members, who finish it with our in-house double-coat primer process. We then inspect each piece, ensuring that it provides our customers with superior durability and performance. This process provides our customers with a product that is easy to install and will deliver longevity and performance.

THE POWER OF CHOICE

MEET INTEGRAWOOD™ TIGHT KNOT + INTEGRAWOOD™ CLEAR.

Clear

Tight Knot

We offer **INTEGRAWOOD™** in two, distinct grades: **INTEGRAWOOD™** Tight Knot and **INTEGRAWOOD™** Clear.

» **INTEGRAWOOD™ Clear** offers a top-quality product containing more traditionally straight, unified grain that is free of knots and imperfections.

» **INTEGRAWOOD™ Tight Knot** on the other hand, is our more economical option of the **INTEGRAWOOD™** line, comprised of wood from the core of the tree that features some knots throughout the material.

BUILT FOR VERSATILITY

We produce **INTEGRAWOOD™** with versatility, durability, & sustainability in mind. We achieve this by working with sustainable tree harvesters and by producing **INTEGRAWOOD™** in our fully solar-powered facilities.

A stack of INTEGRAWOOD ranging from 2"x4" to 2"x12"

PROFORMAWOOD™

WESTERN WOODS PREMIUM WESTERN RED CEDAR PATTERNS + TRIM

Boasting a core of Western Red Cedar that produces nearly twice the stability of many other softwoods, our PROFORMAWOOD™ Premium Western Red Cedar Patterns + Trim delivers the professional-grade longevity, performance, and aesthetics you need to make your next building project a success.

IT WORKS AS HARD AS YOU DO.

PROFORMAWOOD™ is lightweight and available in a variety of sizes. Because of the fine, straight grain structure and even texture found in Western Red Cedar, PROFORMAWOOD™ is easy to cut, saw, and nail with traditional tools. Additionally, PROFORMAWOOD™ is easily planed to a smooth surface or milled to nearly any pattern. It also holds glue bonds and adhesives exceptionally well, providing a solid base for wood stains and paint.

PERFORMANCE THAT LASTS.

The Western Red Cedar found at the heart of PROFORMAWOOD™ boasts a natural resistance to harmful elements such as moisture, decay, and insect damage. And when it is pre-stained, PROFORMAWOOD™ lumber will last for decades and maintain its signature appearance even in extreme weather environments. All of this has made PROFORMAWOOD™ the premier choice amongst builders for exterior siding projects.

RUSTIC RIDGE

PREMIUM AGE TREATED LUMBER BY WESTERN WOODS

With Rustic Ridge™, you can have the fantastic look and feel of barn wood without all the waiting and headache.

Western Woods Rustic Ridge™ Premium Age Treated Lumber offers the timeless aesthetics of silvered, aged lumber with all the benefits of fresh timber. Each finished piece features rich tones, deep texture, long life, and excellent performance, all in one package. Better yet, Rustic Ridge™ delivers its striking, aged appearance on day one - no waiting, staining, painting, or additional maintenance required - resulting in a cost-effective product that provides exceptional value.

And the benefits do not end there. We age each piece of Rustic Ridge™ using a unique blend of naturally occurring chemicals, making it safe for builders, end-users, and the environment. (See the next page for additional information). Our premium-quality lumber is found at the core of each piece, ensuring excellent performance, versatility, and durability.

ORDER RUSTIC RIDGE™ TODAY

To learn more please call our sales team at (800) 824-4100 or by checking out our website: www.westernwoodsinc.com.

WHAT WE DO

Rustic Ridge Douglas Fir

OLD WOOD LOOKS WITH NEW WOOD PERFORMANCE.

BARNWOOD AESTHETICS

RUSTIC RIDGE™ is able to deliver the classic look of aged barn wood while delivering new wood performance and value thanks to our blend of all-natural aging treatment.

How It Works

Rustic Ridge™ Premium Age Treated Lumber achieves its striking aged appearance thanks to our unique mixture of naturally occurring chemicals and minerals. It is not a stain or varnish, and it is not a paint. Our "stimulated aging process" reaches deep into the wood on a microscopic level, altering the fibers found at the core of each piece, similar to the natural aging process experienced by lumber as it is exposed to the elements. Better still, Rustic Ridge™ can accomplish this without the cupping, splitting, or peeling that typically occurs as part of the natural aging process.

Home featured represents some of the applications of RUSTIC RIDGE™. It was not actually produced with this product.

REMANUFACTURING

One of our many services, Western Woods offers our full-service custom lumber remanufacturing. Using our state-of-the-art facility, we produce secondary wood products backed by our years of experience in the field of softwoods. With our know-how and assortment of modern equipment, including moulders, resaws, Stainline, Primeline, and more, we are confident we can deliver on any of your custom lumber production needs.

We handle all of our materials in our clean environment - from our asphalt exterior surfaces to our resaw and planer buildings, all the way into our shipping facility for bundling, end capping, and wrapping. We consistently monitor the textures from our machines and maintain a large assortment of pattern knives to provide customers with an extensive range of product options, including custom patterns in both rough and smooth textures. We carefully control the conditions of our Primeline and Stainline service areas to guarantee we deliver a superior quality product. Everything at Western Woods is stored inside our warehouse to guard against the elements and provide ultimate protection.

→ DOING IT RIGHT

Our remanufacturing products are made using top-quality tools used by experts in the trade. Going a step further, we use zero waste practices, recycling all spare material.

WHAT WE DO

CUSTOM CUT™

CUSTOM LUMBER BY WESTERN WOODS

Making every project look and feel unique is the goal of every craftsman, designer, and architect. With **Western Woods Custom Cut™** custom wood services, you can do just that. This year, we have broken new ground. In addition to our expansive inventory of conventional building materials, we are proud to offer our customers the option to order materials to spec. Slabs, dowels, beams, fencing, and more - each piece cut to your exact specifications.

With our new mill, our team will produce lumber tailored to your needs and specifications. We are not talking about small pieces, either. Our mill is capable of cutting logs up to 21 feet long and 36 inches in diameter, providing you with countless possibilities for even large-scale projects.

Better still, our Custom Cut™ service, like many of the services offered here at Western Woods, is provided with sustainability in mind. Our expert craftsman has optimized our cutting and milling processes to produce a superior product with minimal waste, carefully planning each cut to make the most of each log we cut. We are efficient with our logs and deliver a fast turnaround - a great quality product, rapid delivery, and unrivaled quality service. You can count on our expert team to deliver every time.

→ The magnificent cabin below was built entirely out of lumber produced via our **Custom Cut™** service. Learn more by contacting a member of our sales team via **(800) 824-4100** or by visiting our website at www.westernwoodsinc.com.

DISTRIBUTION

Since our start in 1971, we at Western Woods have built our reputation as a leading wholesale distributor of lumber, building materials, and specialty products. We are committed to delivering to our dealers and customers the best value found on the West Coast. One way we accomplish this is through our volume buying strength. We ensure you, our customer, a steady supply of products at competitive prices and rapid delivery.

By strategically utilizing trucks, vans, and rail, we offer convenient shipping options as well as prompt and efficient delivery. And our reach is growing. With a second location based in Southern California, our premium products, professional services, and unrivaled customer service are within easier reach - allowing us to empower the success of your projects more quickly and conveniently than ever before.

MIDDLE LEFT: Our Northern California yard prepping loads for shipping.

BOTTOM LEFT: A load of lumber including Western Woods Premium Designs being prepared to be shipped out.

WHAT WE DO

STAIN LINE

➤ Why is factory applied staining better?

First of all, painting or staining freshly milled natural wood is necessary. Without it, your new siding will quickly darken and will now be susceptible to mold, cupping, and movement in the wood. Getting that "new" look will now require substantial time and money.

Weather conditions, including rain, snow, drizzle, and higher-than-normal humidity ratings, can be a significant obstacle for proper stains, whether it is an oil or latex application. Depending on where in the country you live and what the average humidity ratings may be, applying exterior stain may not be possible on the job site. We apply all stains in our climate-controlled facility, drastically eliminating the possibility of moisture contamination.

Whether you are applying your stain via spray, brushing, rolling, or back rolling, consistent application to your product is vital. That is why we offer our state-of-the-art stain line. This process starts by "flooding" the material, ensuring a total, equally distributed coverage, followed by brushing to get complete, even coverage.

This cabin was built using Western Woods Stain Line factory-applied lumber.

PRIME LINE

Give your new wood siding and its natural exterior finish the superior protection it deserves with Western Woods Prime Line services.

→ *The basics of priming*

Using our state-of-the-art paint booth, we apply an even coat of high-quality Premier Finishes, Inc. ("PFI") primer to all four sides of the lumber. Each piece then travels through a drying oven, ensuring the primer is cured evenly at a controlled temperature. The wood then finishes its journey and is inspected for quality. After finishing the process, the lumber is then end-painted to ensure complete protection.

→ *Why is priming recommended?*

Today's homes are frequently wrapped with a vapor barrier, i.e., Tyvek or foiled-faced insulation that does not allow large moisture droplets to flow through. Coupled with the fact that siding is often not vented, this typically results in moisture getting trapped behind the siding. Priming natural wood siding helps control rotting, mold build-up, cupping, and movement in the wood, ultimately giving your siding and finish coat more longevity.

→ *Where is the trapped moisture coming from?*

Trapped moisture occurs when heated or when air-conditioned air from the house radiates out and meets the cold or hot air outside. When the dew point is reached, moisture forms into various-sized droplets. On fall mornings, this phenomenon is evident on your car's windshield. The temperature inside your car is warmer than the outside temperature, which causes water droplets to form. The chance of moisture collecting on the backside of the siding increases in the summer when humidity is at its highest. The high temperatures also promote mildew growth and deterioration at an alarming rate.

FENCING

Redwood Fencing

WESTERN RED CEDAR, INCENSE CEDAR, AND REDWOOD FENCING

Cedar and redwood are two popular materials used for fencing. Red cedar is harvested from the cedar tree, which grows across much of the Northeastern U.S. and Canada, and the redwood tree is found primarily on the west coast. These woods have natural features that make them particularly well-suited for fence construction and other outdoor uses. When comparing these materials, consider how they perform in areas such as cost, maintenance, and visual appeal to help make your final selection.

SPLIT RAIL CEDAR FENCING

Cedar split rail fencing is ideal for keeping horses or livestock. Cedar split rail fencing offers a beautiful, warm country feel to its appearance, making it an excellent choice for landscape fencing as well.

Cedar Fencing

Split Rail Fencing

OUR COMMITMENT TO SUSTAINABILITY

PRACTICING BUSINESS SUSTAINABLY

It's not just a smart business strategy but an essential one for a better tomorrow. As a business that directly depends on our precious natural and limited resources, we are keenly aware of the delicate balance that our industry must maintain in order to keep up with commercial demand while preserving the environment. To help us achieve this goal, we strategically source our material from tree farms that supply high-quality wood that is cultivated and harvested using proven sustainable practices.

Our sustainability efforts don't end there. At our Chico-based facility, we have taken a significant step towards reducing our carbon footprint by installing a massive solar farm consisting of over 1,000 solar panels. **Delivering an average of 337kW**

(kilowatts) daily, our solar farm generates enough energy to power our operations during peak solar hours. This allows us to reduce our annual CO2 emissions to the equivalent of burning over 45,800 gallons of gasoline*.

When you buy lumber from Western Woods, you can feel assured that each piece is sustainably produced at every step. We follow industry best practices to ensure that our production process minimizes waste, from recycling packaging and banding to containing waste chemicals and repurposing sawdust and wood offcuts. By adopting these sustainable practices, we can do our part to preserve our finite natural resources for future generations while still meeting the needs of today's customers.

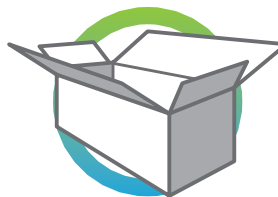

OUR SUSTAINABILITY EFFORTS INCLUDE

SOURCING WOOD FROM SUSTAINABLE TREE FARMS

RECYCLE ALL WOOD WASTE & OFFCUTS

RECYCLE ALL RECEIVED PACKAGING MATERIAL

RECYCLE ALL UNUSED STAIN + PAINT WASTE

▲ **RECYCLING PACKAGING.** We recycle all of the packaging and shipping material we receive on-site. This includes everything from paper wrap to cardboard, from metal banding to pallets. We recycle it all.

▲ **RECYCLING BYPRODUCTS.** We strive to maintain an environmentally conscious production site by recycling as many manufacturing byproducts as possible, including all leftover stains, paints, and wood waste.

GOING GREEN

Arranged in three massive arrays, our 1,080 panel solar farm, generates as much as 337kw everyday. This fully powers all of the operations at our Chico, CA, sales and production headquarters.

WILDLAND URBAN INTERFACE

WILDFIRES: A GROWING CRISIS

Wildfires are getting stronger every year. Even worse, they are burning in more and more parts of the United States. In short: The Wildland Urban Interface (WUI) is growing. It is time to build smarter using WUI-certified lumber products.

At Western Woods, we strive to deliver lumber products that offer industry-leading durability, safety, and performance. We are keenly aware that more and more people are building into the **Wildland-Urban Interface (WUI)** and the consequences that come with it. We take wildfires seriously, and for us, it's personal. Our team has experienced first-hand the effects of wildfires on our community. In response, our team has ambitiously pursued methods to produce lumber that offers increased survivability in environmental events such as wildfires. Whether your project is a home, a commercial structure, or a simple outbuilding, every moment your structure withstands a wildfire matters.

With that in mind, our team is proud to announce that our Premium Designs products* have been produced to comply with the rigorous standards outlined in the WUI Products

YOUR SAFETY MATTERS TO US.

Handbook. Published by the **California State Fire Marshal (SFM)** as a supplemental part of the **California Building Code (CBC)****, the WUI Products Handbook outlines all of the products that have been reviewed by the SFM Staff and had their compliance verified based upon a thorough analysis of product performance test results and product reliability features. Every WUI-verified product is listed, and a listing number is then attached to the product.

To learn more about the Wildland-Urban Interface, check out their website at www.osfm.fire.ca.gov. To get a complete listing of our WUI compliant products, please turn to **PAGE 30** or visit our website at westernwoodsinc.com.

*This includes, ENDURAWOOD™ and PROFORMAWOOD™ lumber products. Additional, non Premium Designs products listed as well. See our website for details.

Cal Fire

The California Office of the State Fire Marshal Fire Engineering team has reviewed the technical documents for each of our products and deemed them acceptable to be included in the Cal Fire Building Materials Listing Program (BLM). Learn more at fire.ca.gov.

OUR WUI-CERTIFIED PRODUCTS BROCHURE

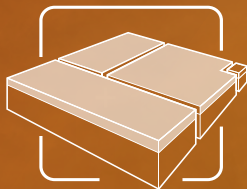

In our WUI-Certified Products Brochure, we introduce you to our range of versatile, premium WUI-certified products, provide product certification docs, and other tools and information to make your future builds a success. It's packed with everything you need to build better, including:

- » Updated product WUI Certification documentation.
- » Product introductions.
- » Digital document access.
- » Access to additional digital tools & resources.

WUI BY THE NUMBERS

The WUI is the fastest growing land use type in the United States.

97% of new WUI land was due to new home construction

Wildfires are more frequent, more intense, & are burning 2x longer.*

80 million properties are at 'significant wildfire risk' in the WUI.

1 in 3 homes in the U.S. are located in the WUI.

THE CAMP FIRE, 2018

When the catastrophic Camp Fire wiped out the town of Paradise, the Butte County community - *the community we call home* - was devastated. The disaster was a severe reminder of the sheer destructive power of wildfires. All of us came together to pick up the pieces, to help those that lost in the fire, and make strides toward a safer future. For us, wildfires are personal.
